过电压 Overvoltage

电力是人类现代生产、生活中必不可少的一部分，但电力设施会受到来自内部和外部过电压的威胁，主要有以下几个方面：
雷电：雷击瞬间会产生很大的能量和高达数百千安的浪涌电流，并且瞬态过电压（LEMP:雷电磁脉冲）会沿电力线路入侵，造成电力设施和用电设备损坏。
操作过电压：大型感性（容型）设备（如电源模块）的操作会产生瞬时的过电压。
暂时过电压：主要是持续时间较长（秒级）的工频暂时过电压（不对称接地故障等）和谐振过电压。

Electricity is an essential part of modern human production and life. But power facilities are threatened by internal and external overvoltages. Power system overvoltage mainly includes:
Transient overvoltage of atmospheric origin: Lightning strikes instantly generate high energy, generating surge currents up to hundreds of kA, and lightning wave can invade along power lines, causing damage to power facilities and electrical equipment.
Transient overvoltage due to switching: Switching operations of a power utility may cause overvoltage.
Temporary overvoltage: A long duration (second level) temporary overvoltage (asymmetric ground fault) or harmonious overvoltage.

雷电造成的电涌电压

雷电电磁脉冲（LEMP）会危及电气和电子系统，因此应采取LEMP防护措施(SPM)以避免建筑物内电气和电子系统的失效。而雷电磁脉冲产生的浪涌可由直击雷、临近雷击或远处雷击引起。根据相关研究资料表明，一定范围内的雷击都有可能在线缆上产生危险过电压，危害与之相连的设备。

Electrical and electronic system are subject to damage from a lighting electromagnetic impulse (LEMP). Therefore SPM need to be provided avoid failure of internal system. LEMP may caused by direct, near and far lightning strikes. According to the relevant research, lightning strikes within a certain distance may cause dangerous overvoltage on the cable, endangering the equipment connected to it.

雷电的危害 Damage due to lighting

雷电可能产生三种基本的损害类型：
—D1：接触电压和跨步电压使人和动物收到伤害；
—D2：包括有火花的雷电流效应引起的物理损害（火灾、爆炸、机械损坏、化学品泄漏等）；
—D3：LEMP导致内部系统失效。

The lighting can cause three basic type of damage:
—D1: injury to living beings by electric shock
—D2: physical damage (fire, explosion, mechanical destruction, chemical release) due to lighting current effects, including sparking
—D3: failure of internal systems due to LEMP

SPD

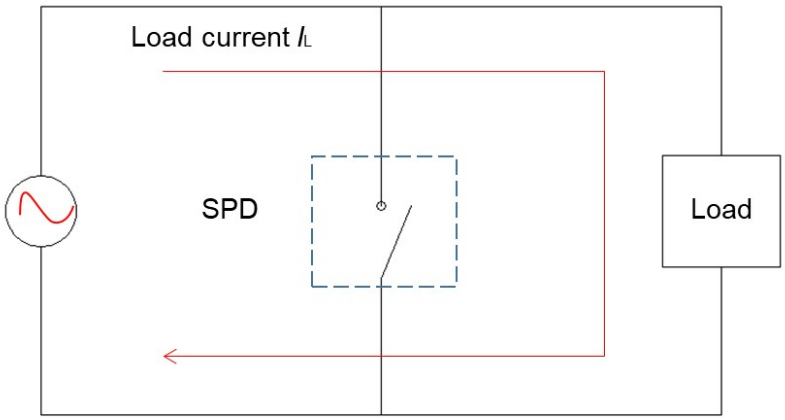
工作原理 Operation Principle

当电流无浪涌时，SPD等效于开路（阻抗 > 100 MΩ）。

SPD is equivalent to open circuit when the circuit without surge (Impedance > 100 MΩ).



当电路有浪涌入侵时，SPD回路突变为低阻抗，将浪涌泄放到大地中。

When a surge invades the circuit, the SPD circuit mutates to a low impedance, releasing the surge current into the ground.
